

**MI PROTECTION
FACE SHIELD CATALOG**

OUR STORY

Injection and extrusion rhyme with innovation and collaboration.

Out of the Covid-19 context, our 2 companies work mainly in the automotive field. At the end of March 2020, we learned that this sector of activity was not essential during this crisis. We are fortunate to be surrounded by employees who are determined to do their part by showcasing **our expertise**. The simple idea of making **protective equipment** for our front-line workers quickly motivates us! Allowing some employees to return to their jobs, happy to help protect people from the virus: new energy hangs over the team.

In just a few days, a proven concept of a **shield frame** is 3D printed for validation. Following the design and manufacture a mold **in record time**, the production of the first parts was an immediate success. Witnessing the growing demand, we are happy to be able to **produce in large quantities**. The team is focused on advancing the concept and **developing other products** tailored to the needs. This great **synergy** gives way to the creation of co-LABinnov. Always on the lookout to **improve the performance of our products**, we welcome your comments and suggestions.

MI LAB + eLab = **co-LAB**

Vincent Houle, President of MI Integration
Olivier Lacombe, Co-Founder of eLab
